

This API Endpoint Plan defines all routes required for RaceDay this ensures that organisers and participants can manage events, categories, enrolments and results in line with the approved functional requirements.

HTTP Method	Route	Description	Role Required	Request Body	Expected Response
POST	/api/auth/register	Register a new Event Organiser or Participant account.	Public	{ "name", "email", "password", "role" }	201 Created – User registered successfully. 400 Bad Request – Invalid input. 409 Conflict – Email already exists.
POST	/api/auth/login	Authenticate a user and return a JWT access token.	Public	{ "email", "password" }	200 OK – JWT token returned. 401 Unauthorized – Invalid credentials.
GET	/api/profile	Retrieve the logged-in user's profile information.	Logged-in User	None	200 OK – User profile. 401 Unauthorized.
PUT	/api/profile	Update the logged-in user's profile information.	Logged-in User	{ "name", "email", "rank", "permitNo" }	200 OK – Profile updated. 400 Bad Request.
POST	/api/events	Create a new road event.	Event Organiser	{ "name", "description", "date", "location", "distance", "eventType", "routemap" }	201 Created – Event created. 400 Bad Request.
GET	/api/events	Retrieve all available events.	Logged-in User	None	200 OK – List of events.
GET	/api/events/{id}	Retrieve details of a specific event.	Logged-in User	None	200 OK – Event details. 404 Not Found.
PUT	/api/events/{id}	Update an existing event.	Event Organiser	{ "name", "description", "date", "location", "distance", "eventType", "routemap" }	200 OK – Event updated. 404 Not Found.
DELETE	/api/events/{id}	Delete an existing event.	Event Organiser	None	204 No Content – Event deleted. 404 Not Found.
POST	/api/events/{eventId}/categories	Create a category level or distance for an event.	Event Organiser	{ "distance", "categoryLevel" }	201 Created – Category created. 404 Not Found.
GET	/api/events/{eventId}/categories	View all categories for a specific event.	Logged-in User	None	200 OK – List of categories. 404 Not Found.
POST	/api/enrolments	Register the logged-in participant for an event by selecting a category.	Participant	{ "eventId", "categoryId" }	201 Created – Enrolment successful. 400 Bad Request. 404 Not Found.
GET	/api/events/{eventId}/enrolments	View all participant enrolments for a specific event.	Event Organiser	None	200 OK – List of enrolments. 404 Not Found.
POST	/api/results	Record a participant's finishing position and status after an event.	Event Organiser	{ "participantEventId", "position", "status" }	201 Created – Result recorded. 404 Not Found.
GET	/api/results/my	View the logged-in participant's own race results.	Participant	None	200 OK – List of results. 401 Unauthorized.

Notes:

- The fields in the /api/profile endpoint are role-dependent. Participants update name and rank, while Event Organisers update email and permitNo. The endpoint returns and updates only the fields relevant to the authenticated user's role.
- Authentication is implemented at the application layer and is therefore included in the API Endpoint Plan. Since the ERD models the RaceDay business domain, authentication is not represented as a separate database entity.
- Additional endpoints (such as live weather and route information) may be added in future versions of RaceDay to enhance the participant experience. These endpoints are outside the scope of the current functional requirements and are therefore not included in this API Endpoint Plan.
